## PROFICIENCY CHALLENGE 9 ANSWER KEY

AMV = "Answers May Vary"

| 1 a | $y=(3 / 4) x$ |
| :---: | :---: |
| b |  |
| c | Paola had a 2 meter head started. Explanations may cite graph and/or equations. |
| d | He should make the race 6 meters long. Explanations may vary, but the point of intersection $(8,6)$ represents the time and distance that they are both equidistant from Ricardo's starting point and therefore tied. |

| $\mathbf{2}$ a | Not a valid statement. |
| :--- | :--- |
| b | Valid statement. |
| c | Not a valid statement. |
| d | Valid statement. |

| 3 | $-3 x-15$ | $-3(x+5)$ | $3(-x-5)$ |
| :--- | :--- | :--- | :--- |

$4 \quad$ AMV; The slope of the graph of the function should be 3.

```
5 a Line A: y=-(1/2)x-2
    b AMV; As an example, see graph below.
```

```
    c Answers may vary. As an example, the equation of Line B is y=-2x+1.
    d Line A: -3 = (-1/2)(2) - 2
        -3=-3
        Line B: -3 = -2(2) + 1
        -3=-3
```

## PROFICIENCY CHALLENGE 10 ANSWER KEY

AMV = "Answers May Vary"

| $\mathbf{1}$ | C |
| :--- | :--- |
| $\mathbf{2}$ $\mathrm{P}=10 / 16$ or $5 / 8$ or .625 or $62.5 \%$ <br> $\mathbf{3}$ A |  |

$4 \quad$ AMV; As an example, see the graph and calculations below. Line B

Line A: $y=(-1 / 2) x+3$
$4=(-1 / 2)(-2)+3$
$4=1+3$
$4=4$
Line B: $y=-2 x$
$4=-2(-2)$
$4=4$

## PROFICIENCY CHALLENGE 11 ANSWER KEY

AMV = "Answers May Vary"

| $\mathbf{1} \mathrm{a}$ | 11 |
| :--- | :--- |
| b | $2 \times 10^{-2}$ |
| c | $8 \times 10^{8}$ |
| d | $7 \times 10^{5}$ |

| 2 | $3 \times 10^{4}$ or 30,000 |
| :--- | :--- |

| 3 | $4.2 \cdot 10^{19}$ |
| :--- | :--- |

AMV; As an example: $\left(6 \cdot 10^{10}\right)\left(7 \cdot 10^{8}\right)$

| 4 | a | Tatiana is more accurate. |
| :--- | :--- | :--- |

AMV; Students may refer to the linear interpolation method to make rational number approximations.

5 AMV; As an example: $2^{4} \cdot 2^{2}$

| 6 | AMV; As an example: $\frac{x^{5}}{x^{9}}$ or $\left(x^{-1}\right)\left(x^{-3}\right)$ |
| :--- | :--- |

7 AMV; As an example: $(-3)^{-2}$

| 8 | a | $6^{2}$ |
| :--- | :--- | :--- |
| b | $x^{-3}$ or $1 /\left(x^{3}\right)$ |  |
| c | $x^{-1}$ or $1 / \mathrm{x}$ |  |

## PROFICIENCY CHALLENGE 12 ANSWER KEY

AMV = "Answers May Vary"

| 1 | $x=35^{\circ}$ | $y=35^{\circ}$ |
| :--- | :--- | :--- |

2 AMV; Check student sketch for accuracy. Sides should be 9-12-15 units.
$3 \quad x=18 \mathrm{~cm}$
$4 \quad$ Yes. The diagonal of the cube is about 13.8in. A common mistake students may make is only finding the diagonal of the face (only about 11.3in). Students need to use this information to find the diagonal of the cube.

| $\mathbf{5}$ |  Bike No Bike <br> Total   <br> Skateboard 2 2 <br> No <br> Skateboard 10 6 <br> Total 12 8 |
| :--- | :---: | :---: | :---: | :---: |

[^0]
[^0]:    6
    AMV; The purpose of this problem is to have students think about using tools strategically. They do not need to do each task. As examples:
    a. a ruler
    b. a coordinate plane on graph paper
    c. mental math
    d. a calculator
    e. an ordered list or table of values
