## READY-X

## Reasoning Algebraically and Logically

## What is READY-X?

READY-X is an algebraic reasoning game that requires solution of equations and systems of equations.

Gameboard: The board is a 3-by-4 grid with 3 rows, 4 columns, and 12 spaces.
Each space contains one of the letters: R, E, A, D, Y, or X, with some letters repeated in the grid. Within each grid, same letters represent same numbers. Letter values differ with different grids.

Letter values may be $1,2,3,4,5,6,7,8,9$ or 10 .
At the end of each row and at the bottom of each column is the sum of the numbers in that row or column. Therefore, all rows and columns are addition equations.

That is a total of 7 equations: 4 equations with three variables and 3 equations with four variables.

To complete the grid and determine the value of each letter, R, E, A, D, Y, and X, equations and systems of equations must be solved.

## Example:

One Row of a Grid shows: $\mathrm{Y}+\mathrm{Y}+2=12$.
Then $2 \mathrm{Y}+2=12$. Then $2 \mathrm{Y}=10$, and $\mathrm{Y}=5$
One Column of the same Grid shows: $\mathrm{R}+\mathrm{R}+\mathrm{Y}+\mathrm{R}=29$.
Replace Y with 5 . Then $3 \mathrm{R}+5=29$. Then $3 \mathrm{R}=24$, and $\mathrm{R}=8$.

## The 40 problems are arranged by difficulty

## Section 1: 10 Warm Up

Section 2: 20 Exercise Your Skills

## Section 3: 10 Demonstrate Your X-pertise

Possible Solutions are presented at the end of the book.
Note that solutions are labeled "Possible" because, for most problems, there is more than one solution method. You may want to compare solution methods with others.
